

What drives customer dissatisfaction
in the Olist marketplace?

Mantia Patta

Dataset Overview

Data Source

Public dataset from **Kaggle – Brazilian E-Commerce Public Dataset by Olist**

Dataset Size

~100,000 orders
~99,000 customer reviews
~33,000 products
~3,000 sellers

Time Period

Orders placed between **2016 and 2018**

Main Tables Used

Orders
Order Items
Products
Customers
Sellers
Reviews

Data Model

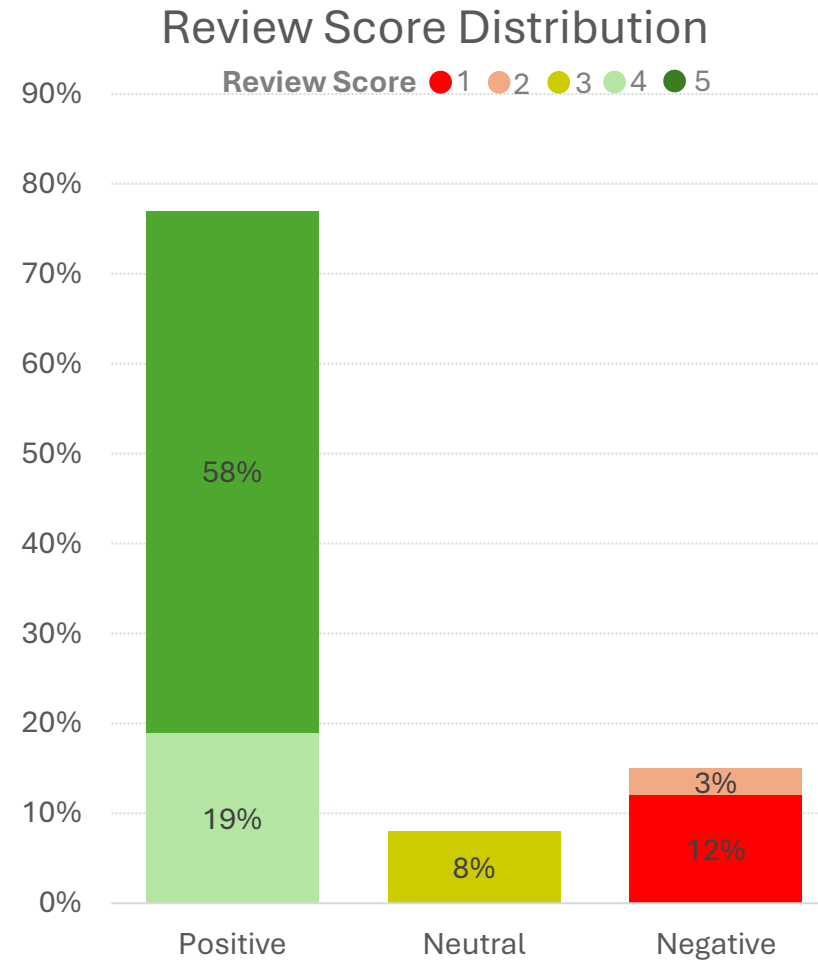

Relational dataset connected through **Order ID**, **Customer ID** and **Product ID**

Overall Customer Satisfaction

Average Rating ★
4,1/5

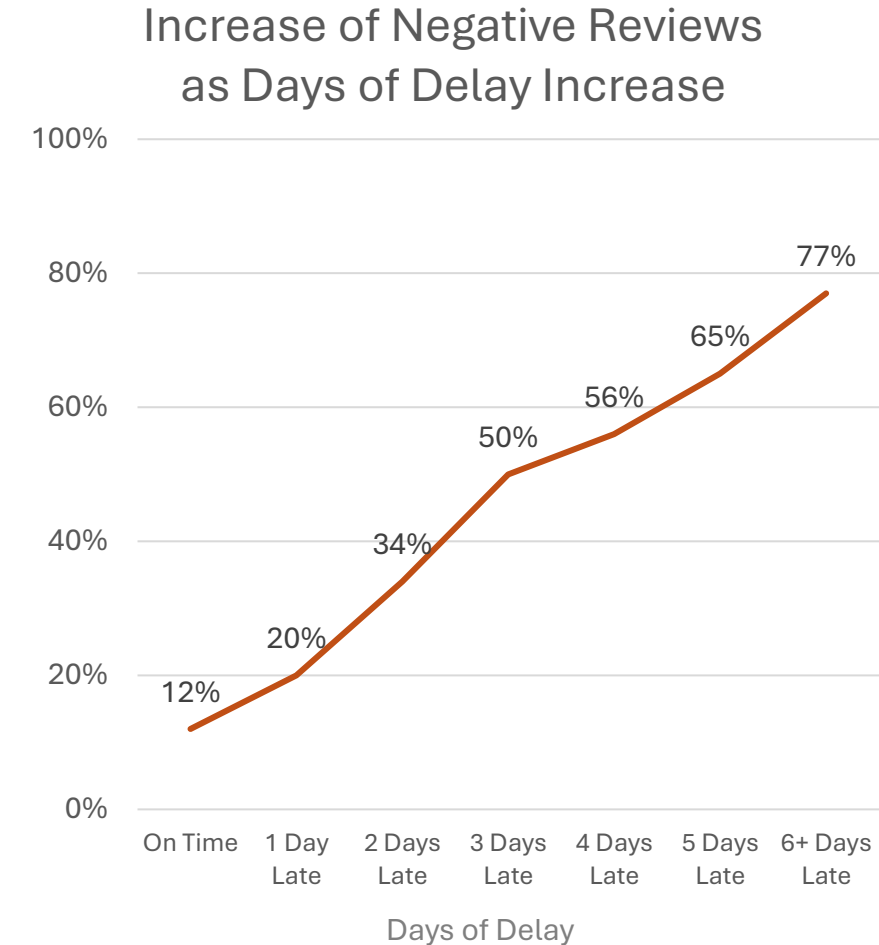

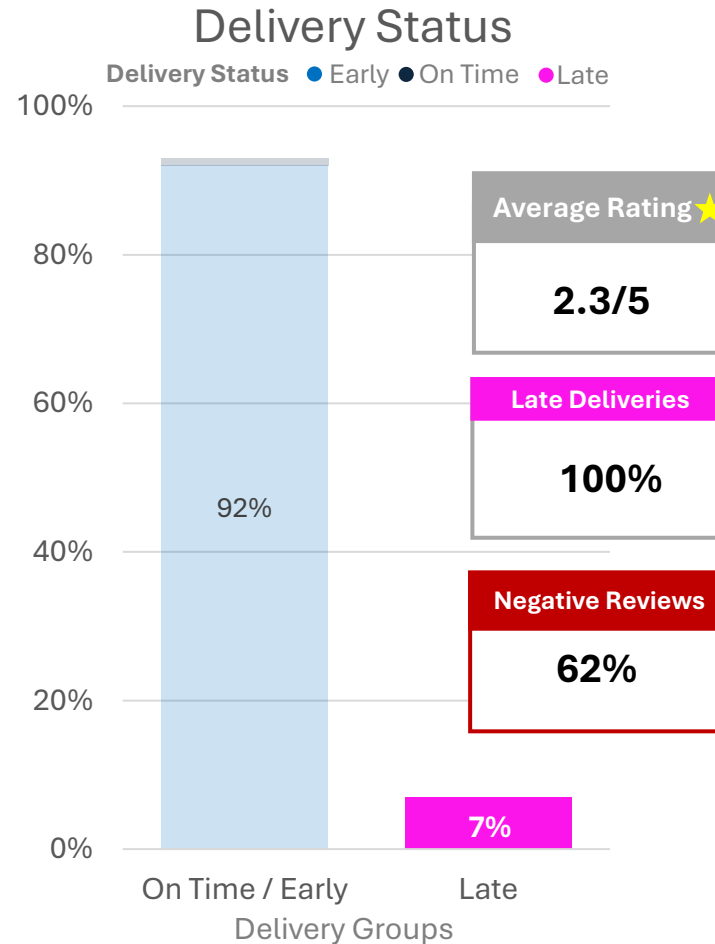

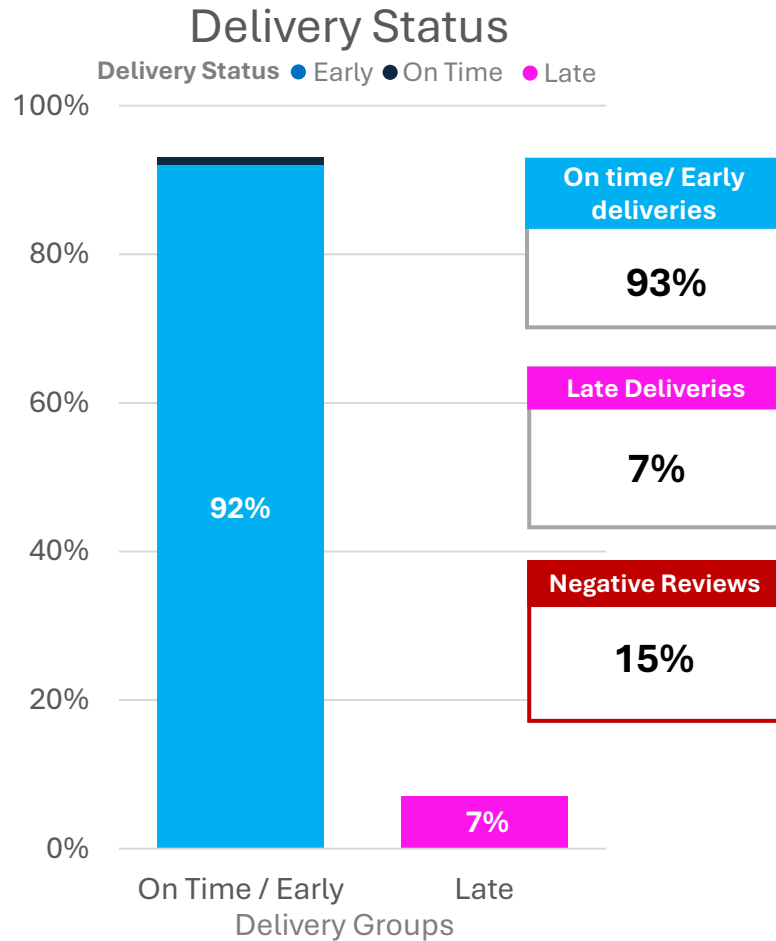

Positive Reviews
77%

Negative Reviews
15%

Delivery Delays are the Main Driver of Dissatisfaction

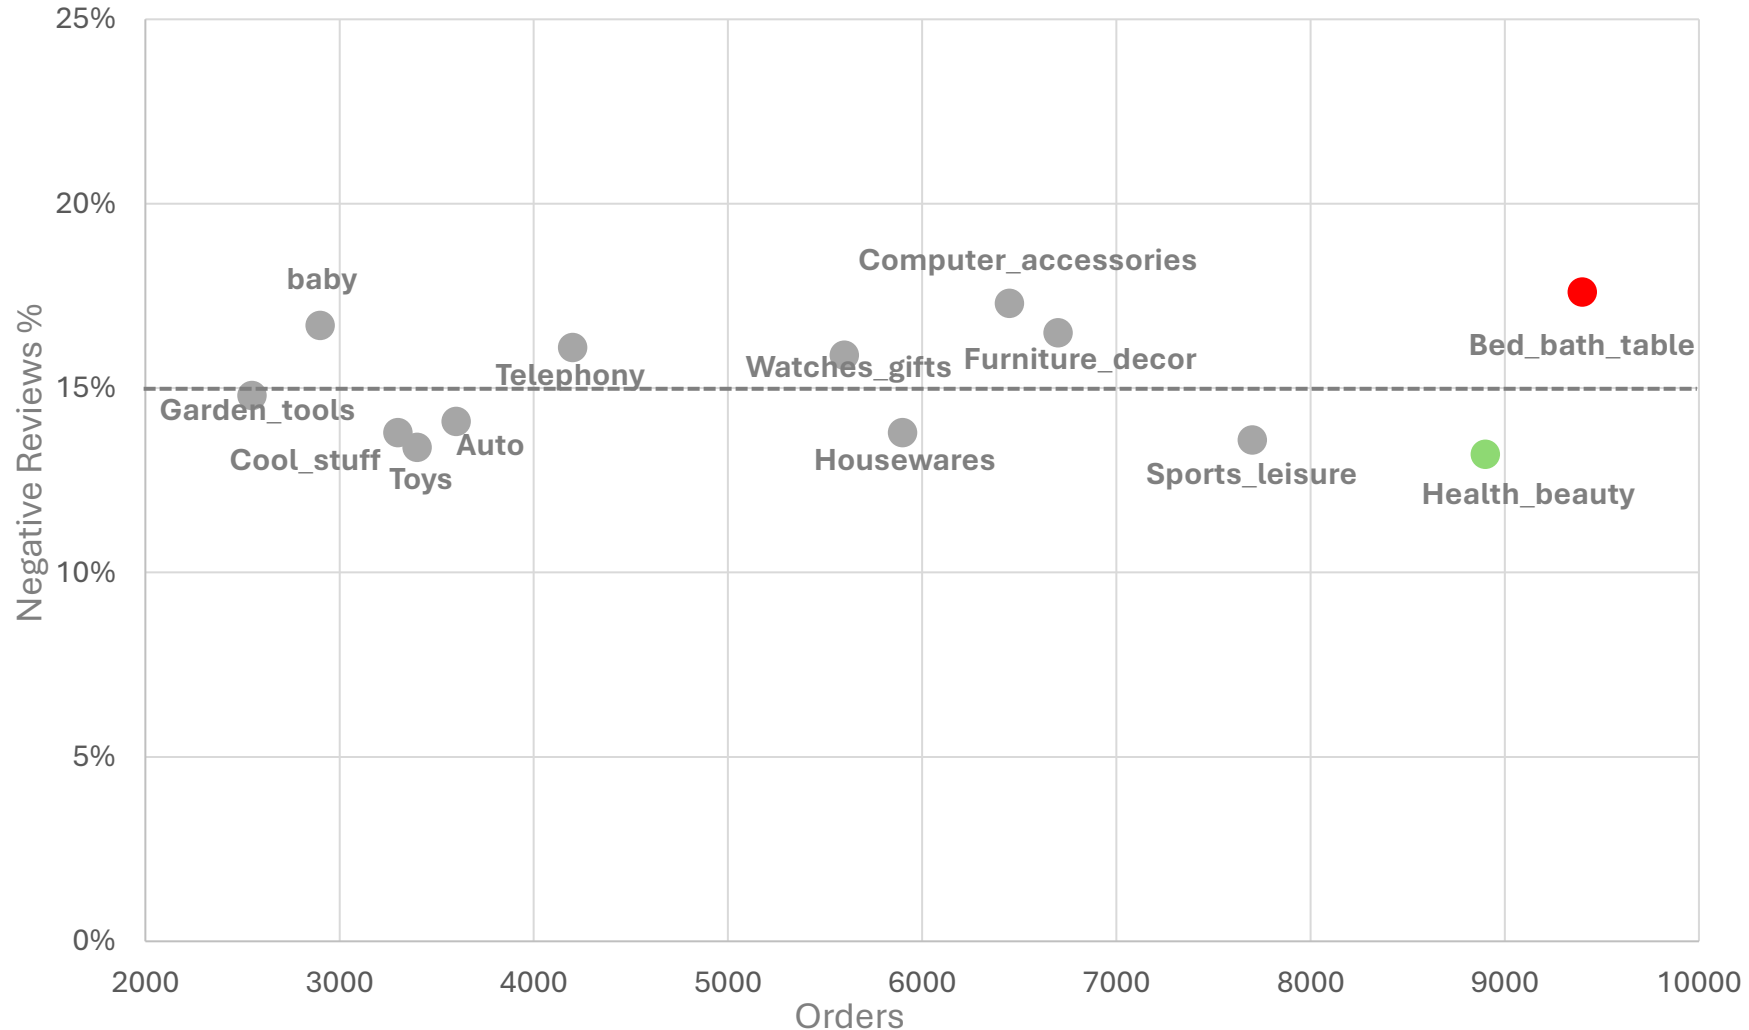

Although rare, **late deliveries** garner very **high rates of negative reviews**.

With each additional day of delay, the likelihood of a **negative evaluation increases significantly**.

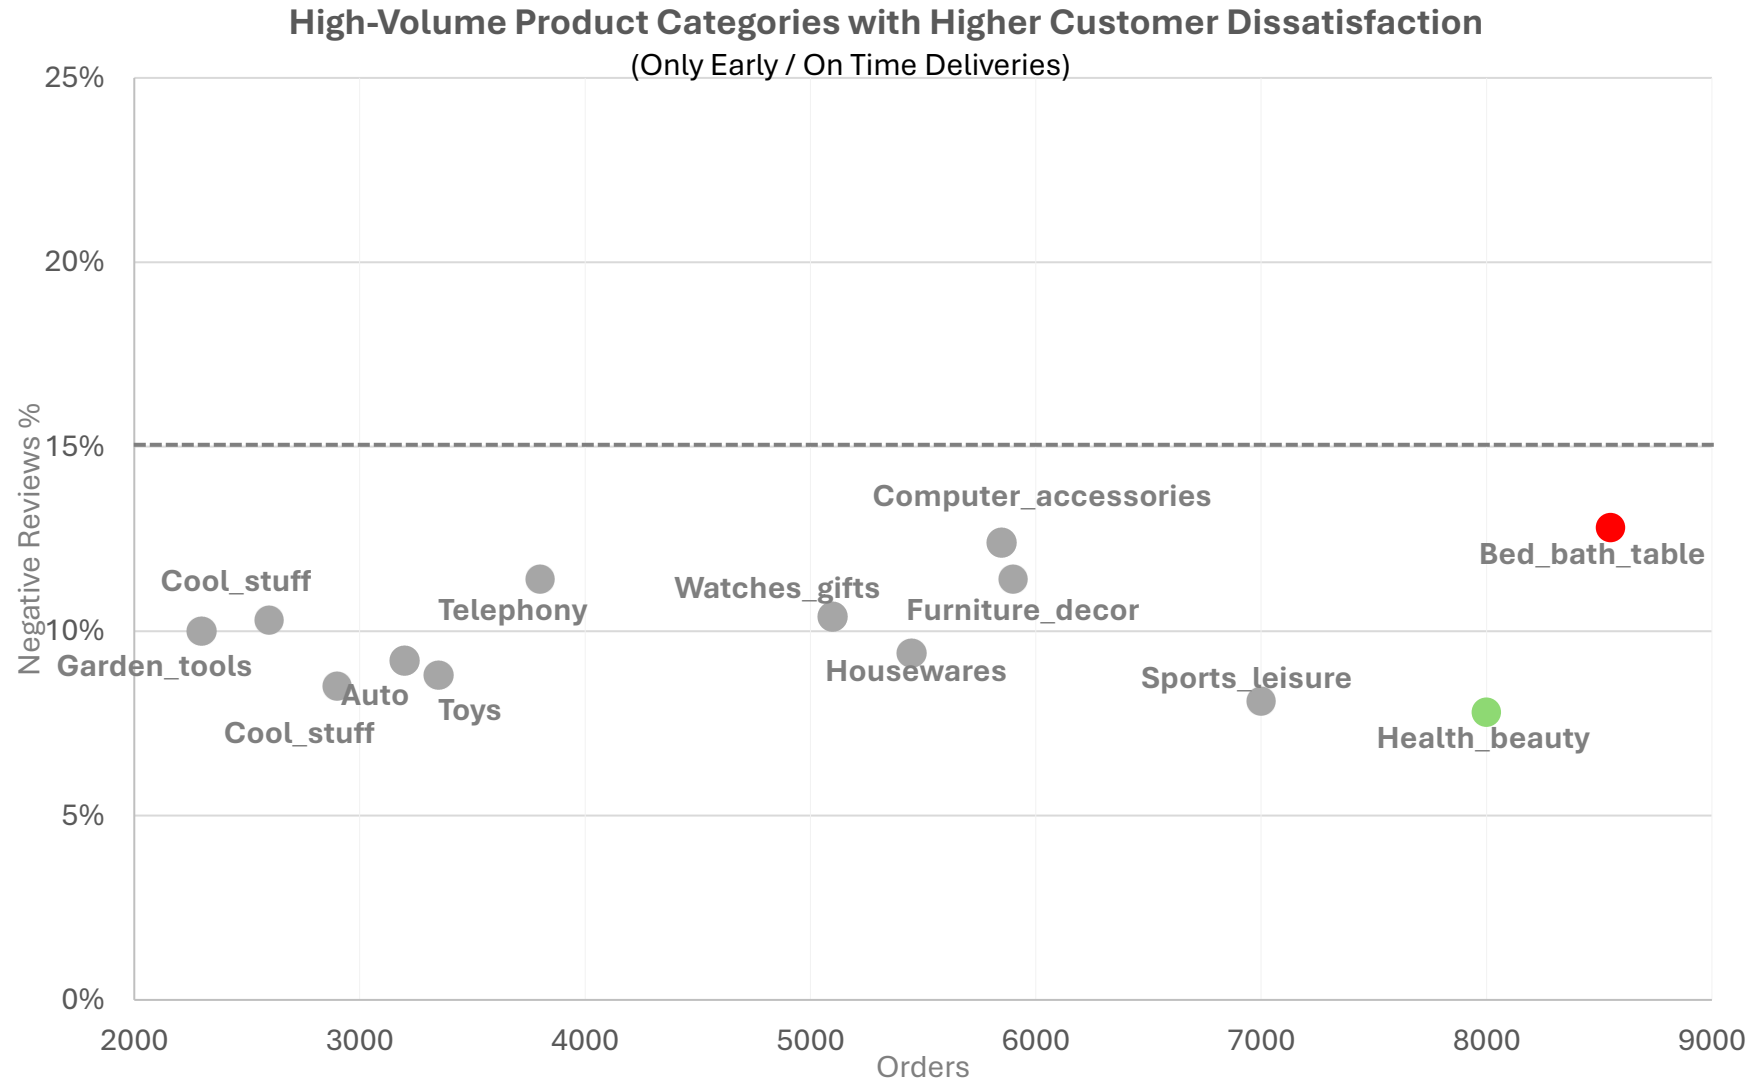

Not All Product Categories Perform Equally

High-Volume Product Categories with Higher Customer Dissatisfaction

The **most popular category** (Bed/bath/table) shows the highest percentage of **negative reviews (18%)** among the top categories.

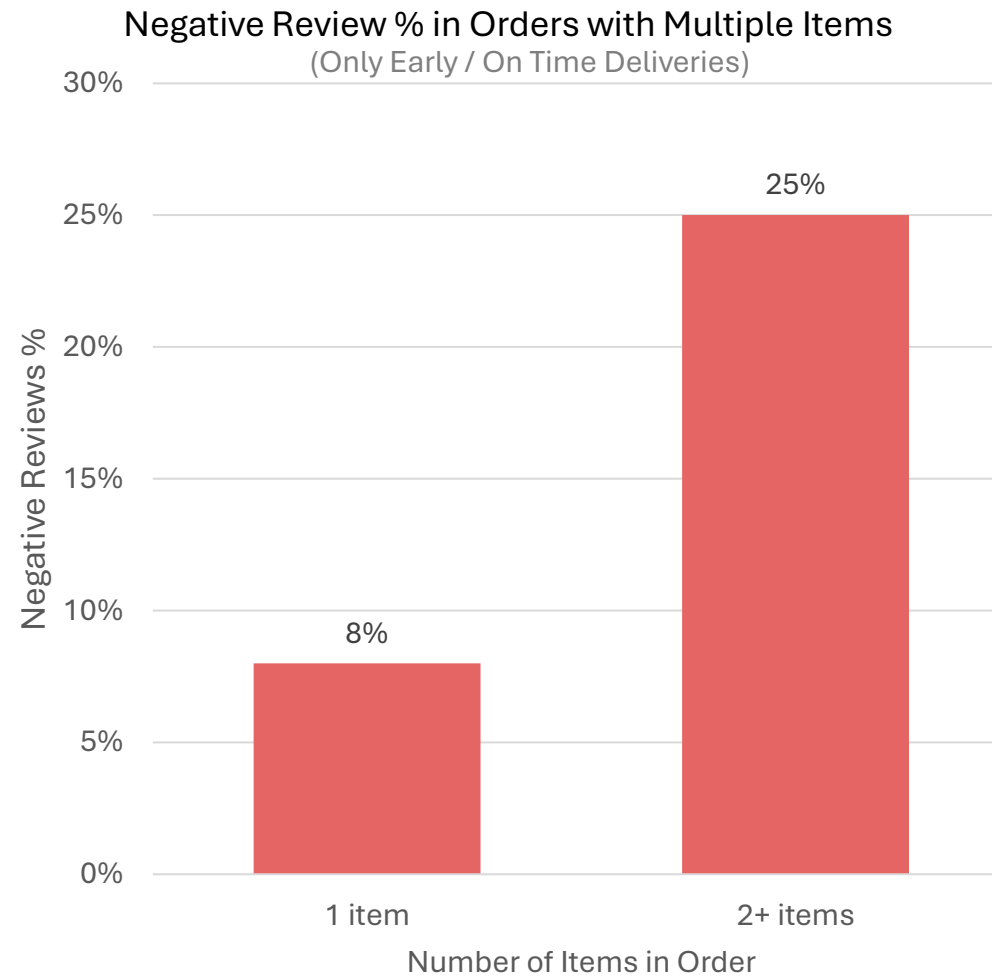

Not All Product Categories Perform Equally

Bed/bath/table again garners the **highest percentage of negative reviews (13%)**

Order Complexity is also Associated with Customer Dissatisfaction

Recommendations

- ! **Improve delivery reliability** to reduce negative customer experiences.
- ! **Strengthen quality control** for multi-item orders
- ! Investigate **high-risk product categories**, particularly **Bed/bath/table** .

Thank you
